

Network Resilience Platform

DeviceBox is the one solution that brings network operations and security under a single pane of glass.

It transforms visibility into action by detecting and fixing cyber and business risks continuously, reducing complexity, preventing outages, and ensuring secure, compliant, and resilient infrastructures.

"Organizations that implement network automation have reduced human errors by 94% and decreased network outages by 83%."

Source: NetBrain – Break from IT Inefficiency (2025)

This showcases the tangible benefits of automation in terms of stability, uptime, and operational accuracy.

Supported Devices & Vendors

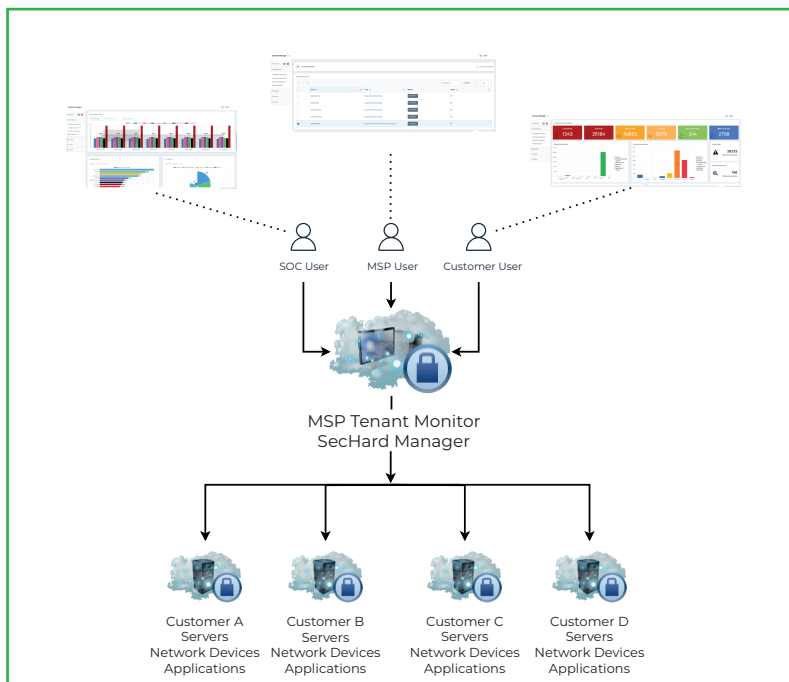

Supports 75+ network products including:

SecHard DeviceBox is the best network resilience platform, offering a comprehensive set of features designed to optimize availability and cybersecurity:

- A unified management console delivering complete asset visibility
- The only network management solution to include integrated TACACS+ and RADIUS server capabilities
- Fortifying cybersecurity with fully automated hardening and remediation
- Consistent performance and accessibility across all network devices
- MSP friendly architecture

MSP Ready - Multi-Tenant Manager
