

# Privileged Access Manager

## Challenges

### Zero Trust Adoption

According to Gartner, more than **50%** of organizations implementing ZT will fail to realize the benefits.

### Data Breaches

According to Verizon DBIR 2021 Report, **77%** of data leaks caused by privilege abuse. The average cost of data loss is **\$4.45M**.

### Complexity of IT Environments

Managing privileged access across diverse platforms and technologies is overwhelming.

### Compliance and Regulation

Meeting industry-specific regulations and compliance standards can be complex.

## Solutions

### Implementing Zero Trust Architecture

**Empowers** organizations to transition to a zero-trust architecture within just **2 hours**.

### Reducing the Risk of Data Leakage

**Reduces** the risk of data leakage by more than **80%**.

### PAM + TACAS + RADIUS

**Consolidated** privilege management for Windows systems, Linux and Mac OS, network devices and many other systems.

### Compliance Support

**Easy compliance** with Zero Trust, NIST CSF, NIST 800-53, NIST 800-171, PCIDSS, SoX, GDPR, KSA ECC and etc. ...

## Possessing a cybersecurity product does not ensure complete security.

Cybersecurity is more than just a product; it's a refined process chain that demands expertise. At SecHard, we specialize in constructing a robust framework integrating people, processes, and cutting-edge technologies. With industry best practices at our core, we ensure your organization's security. Choose SecHard for comprehensive cybersecurity solutions that go beyond products, providing you peace of mind in the digital realm.

**Feel free to enhance your understanding by downloading our PAM Best Practices Guide...**

**PAM Best Practices**

## More Secure

### Wide-range Coverage, Consolidated PAM

#### Secure by Design

SecHard runs on secure, hardened, and restricted Docker containers. Common and Personal Password Vaults are not accessible and isolated.

#### Agentless, Compact, and Enterprise Ready

SecHard is a virtual appliance. Multiple node clustering is available for free to have high availability.

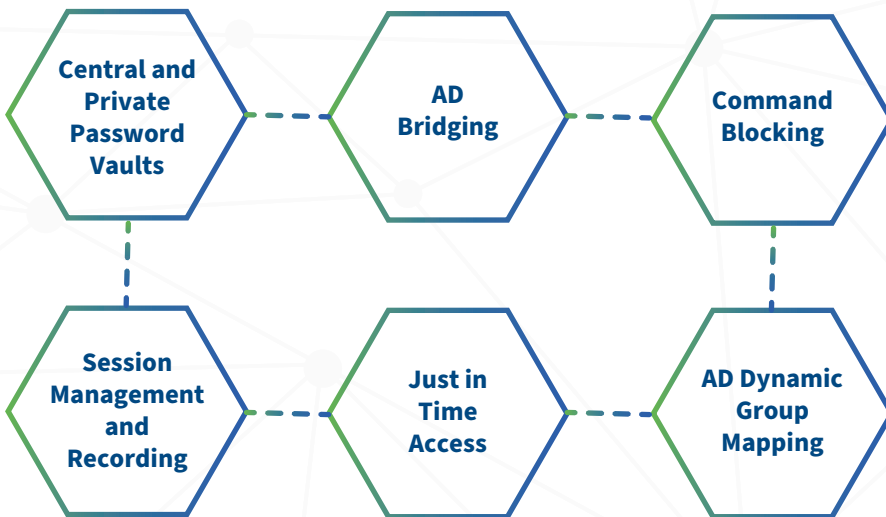

#### PAM for Everything

SecHard offers free Tacacs and Radius servers to cover linux systems and network devices.

#### Risk Aware

SecHard has a risk engine to calculate cybersecurity risks for the IT environment such as high-risk assets may automatically require a second authentication or approval.

## Key Functions
