---

## CASE STUDY

### *Süvari enhances cybersecurity and operational efficiency with SecHard Zero Trust Orchestrator*

Customers worldwide appreciate Süvari's stylish and high-quality men's fashion. With SecHard Zero Trust Orchestrator, Süvari ensures its growing network of stores operates securely and efficiently, simplifying IT operations and enhancing security across the organization.

## IN BRIEF

**Customer**  
Süvari

**Industry**  
Men's Fashion Retail

**Location**  
Türkiye  
(with stores in nine countries)

**Organization Size**  
208  
stores worldwide

### **Challenges**

- Long manual hardening processes
- Need for increased cyber resilience
- Complexity in implementing zero trust principles
- Difficulty in managing network and system security

### **Solution**

- SecHard Zero Trust Orchestrator

### **Featured Products and Services**

- Security Hardening
- Radius
- 2FA
- TACACS+
- Key Manager
- Performance Monitor
- Asset Manager

### **Challenges**

- Improved security posture with server scores increasing from 20% to 85%
- Automated and streamlined hardening processes
- Enhanced backup management and vulnerability assessments
- Improved network security with two-factor authentication and TACACS modules
- Efficient and centralized management of SSL certificates, updates, and notifications

# CHALLENGES

Süvari, a leading men's fashion retailer founded in 1967, has a strong presence in Türkiye and internationally, with 208 stores across nine countries. With a rapidly expanding network, Süvari faced several cybersecurity challenges. The manual hardening processes were time-consuming, and there was a critical need for increased cyber resilience and zero trust implementation. Additionally, managing network and system security was becoming increasingly complex.

# REQUIREMENTS

To address these challenges, Süvari needed a comprehensive solution that could:

- Automate and streamline hardening processes
- Enhance cyber resilience and security posture
- Provide efficient management of network and system security
- Offer robust support for two-factor authentication and network access control
- Simplify backup management and vulnerability assessments
- Centralize management of SSL certificates and updates

# SOLUTION

Süvari implemented SecHard Zero Trust Orchestrator, a comprehensive solution designed to address their cybersecurity needs. The Zero Trust Orchestrator offered multiple modules to automate and streamline security processes, enhance network security, and centralize management of critical security functions.

# BENEFITS

Since deploying SecHard Zero Trust Orchestrator, Süvari has achieved significant improvements in their cybersecurity posture and operational efficiency. The automation provided by SecHard has drastically reduced the time required for hardening processes, and their server security scores have improved from 20% to 85%. The integration of two-factor authentication and TACACS modules has added crucial security layers, enhancing network security and simplifying access management.

Regular automated backups and vulnerability assessments have streamlined their IT operations, while the centralized management of SSL certificates and updates has ensured continuous compliance and security. Overall, SecHard has empowered Süvari to maintain a robust and secure IT infrastructure, supporting their ongoing growth and success.

 **Gökay Önel, System & Network Expert at Süvari, states:**

*"SecHard has transformed our IT infrastructure management. The user-friendly interface, automated processes, and comprehensive support have made our operations more efficient and secure. The continuous improvements in our security scores are a testament to the effectiveness of SecHard. We highly recommend SecHard for any organization looking to enhance their cybersecurity posture."*

# OVERALL EXPERIENCE

SecHard has significantly enhanced the management of inventory and resources across their locations. The discovery feature automatically adds new inventory, streamlining asset management. The automatic topology mapping feature is particularly valued, providing visual representations of device connections, even after long periods, directly on maps.

**Kağan Dökme, IT Director at Süvari, states:**

*"As cybersecurity becomes increasingly critical in today's digital landscape, choosing the right partner is essential. SecHard's Zero Trust Orchestrator has significantly simplified our IT operations while enhancing our security posture. The improvements we've seen in automation, resilience, and compliance have been remarkable, enabling us to focus on innovation and growth with confidence.."*

## ADDITIONAL INSIGHTS

The integration of SecHard's modules and features over the past year has been seamless, with significant improvements in security and efficiency. The anticipated features and continuous support from the SecHard team are expected to further elevate Süvari's IT infrastructure management and security in the near future.
